It is theorized that age-related declines in antisocial behavior reflect normative change in key dimensions of personality. Findings from the developmental literature on personality are integrated with past biological and sociological perspectives on the age-crime curve to articulate a theory that emphasizes the co-development of personality and antisocial behavior from late adolescence to early adulthood.

Explaining the relationship between age and crime ...

A meta-analysis study?identified a number of childhood and adolescent factors that have links with youth antisocial and criminal behaviors. The factors that centered on the child included aggression, attentional problems, motor restlessness, attention seeking, and emotional concerns such as anxiety, self-deprecation, and social alienation.
