Review If the plot of  $n$  pairs of data  $(x, y)$  for an experiment appear to indicate a "linear relationship" between  $y$  and  $x$ , then the method of least squares may be used to write a linear relationship between  $x$  and  $y$ . The least squares regression line is the line that minimizes the sum of the squares  $(d_1 + d_2 + d_3 + d_4)$  of the vertical deviation from each data point to the line (see figure ...
