Psychodynamics, also known as psychodynamic psychology, in its broadest sense, is an approach to psychology that emphasizes systematic study of the psychological forces that underlie human behavior, feelings, and emotions and how they might relate to early experience. It is especially interested in the dynamic relations between conscious motivation and unconscious motivation.

Psychodynamics - Wikipedia

Psychoanalysts view somatization as a form of symbolic communication, defense mechanism, and conflict resolution. Somatization is a process whereby the body translates mental stress into physical expressions that have symbolic value. The process of somatization also represents primitive defense mechanisms, like denial and repression, against undesirable wishes or urges.
