Newcastle Upon Tyne, UK. The defining feature of parkinsonism is bradykinesia, or slowness with decrement and degradation of repetitive movements ("fatigue"). Subtle "bradykinesia" has been reported to occur in the "normal elderly" population, but this may reflect a non-specific slowness rather than bradykinesia as defined above.

Parkinson's disease is the most common neurodegenerative cause of parkinsonism.

Parkinson's disease is a neurological movement disorder. Common symptoms include tremor, slowness of movement, stiff muscles, unsteady walk and balance and coordination problems. There is no cure for the disease. Most patients can maintain a good quality of life with medications. In some patients, surgery can help improve symptoms.
