Spring Boot provides a very good support to building RESTful Web Services for enterprise applications. This chapter will explain in detail about building RESTful web services using Spring Boot. Note – For building a RESTful Web Services, we need to add the Spring Boot Starter Web dependency into the build configuration file.

Spring Boot - Building RESTful Web Services - Tutorialspoint

@EnableAutoConfiguration: Tells Spring Boot to start adding beans based on classpath settings, other beans, and various property settings. For example, if spring-webmvc is on the classpath, this annotation flags the application as a web application and activates key behaviors, such as setting up a DispatcherServlet.

Getting Started | Building a RESTful Web Service - Spring

This signalizes Spring that every time EntityNotFoundException is thrown, Spring should call this method to handle it. When annotating a method with @ExceptionHandler , it will accept a wide range of auto-injected parameters like WebRequest , Locale and others as described here .
