Therefore, if you know a book that's not listed you can simply add the information on the site.

Sidereus Nuncius Italiano
Sidereus Nuncius is a short astronomical treatise published in New Latin by Galileo Galilei on March 13, 1610. It was the first published scientific work based on observations made through a telescope, and it contains the results of Galileo's early observations of the imperfect and mountainous Moon, the hundreds of stars that were unable to be seen in either the Milky Way or certain constellations with the naked eye, and the Medicean Stars that appeared to be circling Jupiter. The Latin word nun

Sidereus nuncius, or, The Sidereal messenger
The Sidereus nuncius, a title commonly translated as the Starry messenger, is a book printed and published within a few months of the date of the observations it reported. The stimulus to Galileo's new observations and the haste to publish an illustrated book was the discovery made in about 1608 by opticians in the Low Countries that two lenses placed at the correct distance when their optical axes were in line gave a magnified image of distant objects, the founding principle of the telescope.

Robert Brecha, professor of physics, discusses the role of technological innovation in Galileo Galilei's Sidereus Nuncius, or Starry Messenger. Interview is an online supplement to the ...

Galileo: Sidereus Nuncius
Galileo Galilei's Sidereus Nuncius is arguably the most dramatic scientific book ever published. It announced new and unexpected phenomena in the heavens, "unheard of through the ages," revealed by a mysterious new instrument. Galileo had ingeniously improved the rudimentary "spyglasses" that appeared in Europe in 1608, and in the autumn of 1609 he pointed his new instrument at the sky, revealing astonishing sights: mountains on the moon, fixed stars invisible to the naked eye ...

In 1609, Galileo Galilei drew one of the first telescopic drawings of the Moon in his book Sidereus Nuncius and noted that it was not smooth but had mountains and craters. Later in the 17th century, Giovanni Battista Riccioli and Francesco Maria Grimaldi drew a map of the Moon and gave many craters the names they still have today.
